TEHJ PATEL

London, UK | UK Right to Work | tehjpatel@gmail.com | github.com/t3hj | linkedin.com/in/tehj-k-patel | t3hj.github.io/portfolio-website

PROFILE

Computer Science graduate (BSc, 2:1, Brunel) who builds software for problems I run into myself: RoboThink Register replaced my team's paper-based attendance process, and Sillage exists because no fragrance app suited how I manage my collection. Final year project Local Lens (AI civic reporting) graded A. Instructor at RoboThink since 2022. Seeking graduate Software Engineering roles; interested in AI and cybersecurity.

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, TypeScript, C#, SQL, HTML, CSS
- **Frameworks & Data:** React, Spring Boot, Node.js, Vite, Streamlit, Tkinter, Supabase, PostgreSQL
- **Tools & Deployment:** Git/GitHub, Docker, Linux/Bash, pytest, Pandas, Matplotlib, Figma, Vercel, Firebase, VPS
- **AI & Security:** Claude Vision AI (API integration), RBAC, Row Level Security, audit logging, Wireshark, TryHackMe
- **Ways of working:** Agile/Scrum (Scrum Master on a university group project), Jira, Trello, Monday.com, Git version control, pytest testing

EDUCATION

Brunel University London — BSc (Hons) Computer Science, 2:1 | 2023 – 2026

- Final Year Project: Local Lens (graded A). Modules: Cybersecurity (A+), Advanced Topics (A), Group Project CS2001 (A-); coursework in OOP and data structures & algorithms
- Awards: CEDPS Academic Excellence Scholarship; Brunel READY Employability Skills & Leadership Award

Stanmore College — BTEC IT (D*D*D*); BTEC Cyber Security & Incident Management (Merit) | 2021 – 2023

EXPERIENCE

RoboThink, London — Master Instructor | previously STEM Instructor, Lead Instructor | Oct 2022 – Present

- Teach Python scripting and robotics to 500+ students aged 4–14, adapting lessons for SEN and other learning needs
- Built RoboThink Register to fix repetitive, paper-based attendance tracking in my own work
- Train and support other instructors; run workshops and update parents on student progress

PROJECTS

Local Lens — AI Civic Reporting Platform | Final Year Project, graded A | localens.streamlit.app

- Built a full-stack platform that turns resident-submitted photos into structured, geolocated reports using Claude Vision AI, Python, Streamlit and Supabase
- Designed a custom priority-scoring engine to triage reports; planned a System Usability Scale (SUS) evaluation

RoboThink Register — Attendance & Lesson Management | github.com/t3hj/RoboThink-Register

- Replaced RoboThink's paper-based attendance and lesson administration with a full-stack Supabase/Vercel application, now in active use
- Implemented attendance, lesson progression, feedback logging and management analytics, with separate Instructor, Management and Admin permissions

Healthy Habits — University Group Project | 8-member software engineering team | Scrum Master & Project Lead

- Worked as Scrum Master and Project Lead in an Agile/Scrum team using 1–2 week sprints, coordinating development tasks, prioritising features and supporting delivery
- Managed tasks and tracked sprint progress using Trello, Jira and Monday.com
- Contributed to the React frontend and Spring Boot backend alongside the wider team

Sentinel — AI Security Incident Investigation Platform (in development) | sentinel-sooty-seven.vercel.app

- Building with React, TypeScript, Vite and Supabase/PostgreSQL: simulated security events, deterministic 0–100 risk scoring and incident investigation
- Implementing Row Level Security, audit trails, Admin/Analyst/Viewer roles, and controlled AI analyst capabilities with role-based remediation approval

Sillage — Fragrance Journal & Discovery App (in development) | github.com/t3hj/Sillage

- Building a React PWA because existing fragrance apps didn't fit how I wanted to manage and explore my collection; QR-based entry and recommendations by weather, activity and occasion are planned

Other projects: SwiftBot Navigation (Java), Secure Password Generator (Python), and more at github.com/t3hj

ADDITIONAL

Mayerfeld Practicum, AI-Assisted Frontend Developer programme (starting October 2026); TryHackMe
